Declarations of Performance (DOP's) Online: independently archived, available via QR-code

Certcheck is the independent and neutral archive for electronic declarations of performance.

Individual subdomains, e.g. **betonwerk.certcheck.eu**, make all documents for every manufacturer available in an independent, neutral, unchangeable archive where they are stored for 10 years. Certcheck thus meets the delegated act requirements in connection with CPR (Construction Products Regulation). QR codes allow for mobile retrieval to close the gaps in the information chain without paper and with access for all: manufacturers, distributors, construction personnel, and costumers.

Certcheck is reliable information that is convenient, simple to access and available at any time. Mobile retrieval on the building site and stationary retrieval for sales. Data retrieval is free of charge.

**Transparency, Security and Reputation -
for Confidence in the Construction Products Market.**

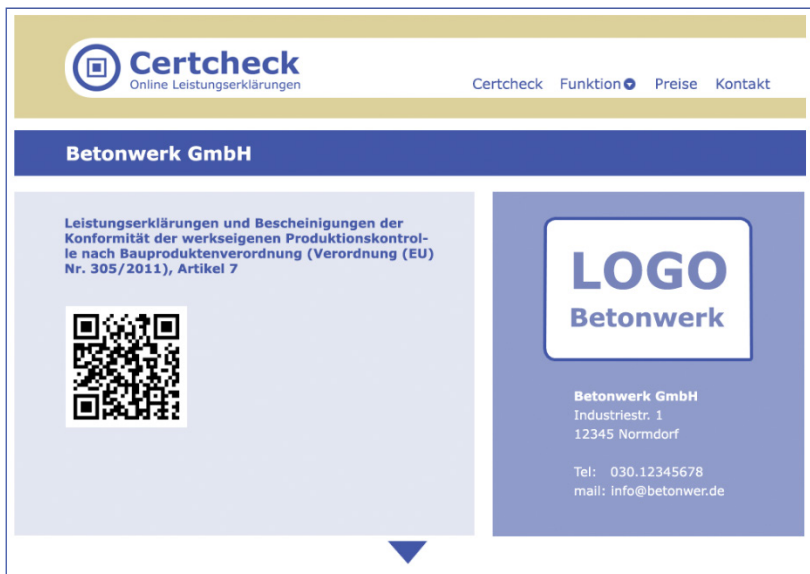

How it works

Certcheck makes manufacturer declarations of performance, certificates and other documents (data sheets) available online.

Distributors and users of construction products receive the website URL from the manufacturer, for example, by printing on the delivery note: „Access our declaration of performance at **betonwerk.certcheck.eu**”.

QR codes can be integrated into the company’s website or attached directly to the products themselves. This allows the declaration of performance to be directly viewed via any smartphone with internet access. Naturally, the information can also be stored and printed.

Screenshot: home page of the manufacturer, opportunity for company logo; on the left: QR Code as a direct link

With Certcheck, manufacturers can offer a simple, archived alternative to paper declarations of performance for the entire supply chain, distributors, intermediate customers (e.g. landscaping and gardening operations) and end customers.

Online Declarations of Performance

Certcheck can be used by all construction product manufacturers without further conditions. This allows all participants in the building products market to retrieve information free of charge. Retrieval remains free of charge for participating manufacturers. Login information and passwords are not required.

Since changes to the content can only be made by Güteschutz Beton, the declarations of performance in the archive are guaranteed to valid.

You can explore how it works by visiting www.certcheck.eu at any time.

Prize Overview

BASIC

500 €
per Jahr

per subdomain
(desiredname.certcheck.eu)
including a location

150 €
per Jahr

additional locations
within the
subdomain

MEMBER*

300 €
per Jahr

per subdomain
(desiredname.certcheck.eu)
including a location

100 €
per Jahr

additional locations
within the
subdomain

*for members of the Güteschutzgemein-
schaften (Quality Control Association)
NRW, Hessen, Rhineland-Palatinate

There are no additional costs for the retrieval of information.

The prices listed above are independent of the number of declarations of performance, and apply to the base versions. Additional programming work will be charged at cost (other/additional languages, search functions, sub-pages for different locations, etc.).

Procedure

1. Create a Declaration of Performance

The manufacturer creates and signs its declarations of performance , including translations into other languages, if desired.

2. Making Contact

Companies wishing to use Certcheck can email info@certcheck.eu to make an informal request for one or more subdomains, optionally also specifying a desired domain.

3. Your Signature

Afterwards Güteschutz Beton will arrange for your own domain and email address for document exchange (name_of_subdomain@certcheck.eu).

4. Activation of Your Domain

The declarations of performance prepared by the manufacturer are sent as a PDF file to this email address. The transfer to the site is carried out by Güteschutz Beton; the companies do not require additional logins or passwords.

5. Our Service

In the case of updates or amendments to declarations of performance, previous versions will be moved to the archive, so that the prescribed 10-year availability is guaranteed. For more information, such as certificates or data sheets, corresponding sub-folders will be established.
